IN THE CLAIMS:

Please cancel claims 1-3 and add new claims 4-7.

Claims 1-3 (canceled).

comprising:
multiple microphones positioned to pick up reverberant sound in a room,
multiple loudspeakers to broadcast sound into the room, and
a multichannel reverberator, comprising:
multiple signal inputs, one for each input channel and which receive similar
bandwidth signals from the microphones;

4. (new): An assisted reverberation or room acoustic enhancement system,

a number of feed back comb filter networks connected one to each signal input,
each comb filter network including a feed forward stage to provide a substantially
constant multi-channel power gain at audio frequencies;

a cross-coupling network cross-coupling the comb filters to increase the reverberation echo density;

and multiple signal outputs, one for each output channel.

- 5. (new): An assisted reverberation or room acoustic enhancement system

 4

 according to claim, wherein the feed forward stage of the comb filters provides a

 transfer function matrix which is unitary at each frequency in the audio range.
- 6. (new): An assisted reverberation or room acoustic enhancement system

 4
 according to claim , wherein the cross-coupling matrix is an orthogonal cross-coupling

 matrix cross-coupling a number of single channel allpass comb filters, positioned
